

NEW PATENT

Parquet Mosaic Panels **WOODEN TILE MACHINE**

**ELECTRONIC CROSS CUT SAW MACHINE
FOR INCLINED/SLANTED CUTS.**

Machine for cutting & chamfering wooden pieces used for crafting wooden mosaic tiles. This process is currently performed using machinery such as spindle moulders, stand-alone cross cut saws & manual equipment which provide unreliable precision machinings with a considerable amount of time loss. Performance & quality depend entirely on the worker. Our machine is designed to carry out these types of machinings automatically, with electronic programings, without any manual intervention.
